

Input data

Optical prescriptions

Preprocessing

Train/validation/test
split

↓
Apply tuned
parameterization

↓
Format model inputs

Generative model

Train model

↓
Generate samples

Inverse processing

Decode model outputs

↓
Invert tuned
parameterization

Physics correction

Match target EFL

↓
Evaluate semi-diameters

↓
Place image plane

Evaluation

Reject material or
geometric failures

↓
Evaluate in CodeV

↓
Retain successful
ray traces

↓
Samples with
optical metrics
